

Driehaus Select Credit Fund

Ticker: DRSLX

KEY FEATURES

- Multi-strategy credit approach
- Absolute return, long/short credit strategy
- Volatility managed, low correlation return objectives
- Hedging of interest rate exposure
- Liquid, transparent "hedged" mutual fund vehicle

INCEPTION DATE

September 30, 2010

FUND ASSETS UNDER MANAGEMENT

\$48 million

FIRM ASSETS UNDER MANAGEMENT

\$8.5 billion

PORTFOLIO CONCENTRATION

Flexible, best ideas approach, generally 40-60 trades

DURATION TARGET

+/- 3 year

VOLATILITY TARGET

Less than the BofA Merrill Lynch U.S. High Yield Master II Index (about 8%, annually)

DISTRIBUTIONS

Quarterly dividends; annual capital gains

PORTFOLIO MANAGERS

K.C. Nelson
Portfolio Manager
18 years of industry experience

Elizabeth Cassidy
Assistant Portfolio Manager
17 years experience

Data as of April 30, 2017

The performance data shown represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Principal value and investment returns will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. Performance data represents the rate that an investor would have earned (or lost), during the given month, on an investment in the Fund (assuming reinvestment of all dividends and distributions). Average annual total return reflects annualized change. Since Fund performance is subject to change after the month-end, please call (877) 779-0079 or visit www.driehaus.com for more current performance information.

¹Refers to credit only. ²Since Inception of the Driehaus Select Credit Fund (9/30/10). ³The Citigroup 3-Month T-Bill Index is designed to mirror the performance of the 3-Month U.S. Treasury Bill. The Citigroup 3-Month T-Bill Index is unmanaged and its returns include reinvested dividends. ⁴The BofA Merrill Lynch US High Yield Index is an unmanaged index that tracks the performance of below-investment-grade, U.S.-dollar-denominated corporate bonds publicly issued in the U.S. domestic market. ⁵Represents the Annual Fund Operating Expenses as disclosed in the current prospectus dated April 30, 2017. It is important to understand that a decline in the Fund's average net assets due to unprecedented market volatility or other factors could cause the Fund's expense ratio for the current fiscal year to be higher than the expense information presented.

TERMS: Effective Duration - A duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. **Effective Spread Duration** - The sensitivity of the price of a bond to a 100 basis point change to its option-adjusted spread. As the rate of the Treasury security in the option-adjusted spread increases, the rate of the option-adjusted spread also increases. **SEC yield** is an annualization of the Fund's total net investment income per share for the 30-day period ended on the last day of the month. **Portfolio Yield-to-Worst** - The lowest potential yield that can be received on a bond without the issuer actually defaulting, aggregated to the portfolio level. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer. **Average % of Par-Longs** - The average dollar price of a bond the Fund is long as a percentage of par. **Average % of Par-Shorts** - The average dollar price of a bond the Fund is short as a percentage of par. **Beta** is a measure of a portfolio's volatility. A beta of 1.00 implies perfect historical correlation of movement with the market. A higher beta manager will rise and fall more rapidly than the market, whereas a lower beta manager will rise and fall slower.

FUND INFORMATION

The Fund invests primarily in U.S. fixed income and floating rate securities, of both investment and non-investment grade credit quality, as well as equities and derivative instruments. The Fund intends to pursue its fundamental opportunistic “bottom-up” trading approach using the following investment strategies:

Capital Structure Arbitrage

attempt to exploit pricing inefficiencies between two securities of the same company.

Convertible Arbitrage

attempt to profit from changes in a company's equity volatility or credit quality by purchasing a convertible bond and simultaneously shorting the same issuer's common stock.

Event Driven

attempt to profit from the consummation of a given event, e.g. a takeover, merger, reorganization or conclusion of material litigation, or based upon the perceptions of a potential pending corporate event.

Pairs Trading

attempt to exploit pricing inefficiencies between the securities of two similar companies by buying the security of one company and shorting the security of the other.

Directional Trading

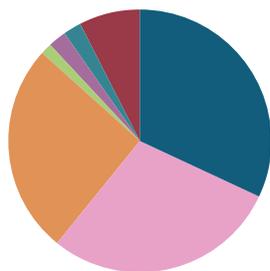

taking long or short positions in equity or corporate debt instruments in anticipation of profiting from movements in the prices of these assets.

Interest Rate Hedging

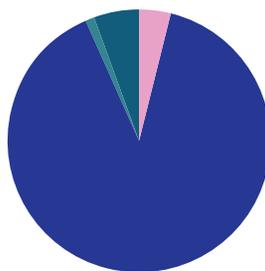

attempt to reduce the performance impact of rising or falling interest rates.

Volatility Hedging

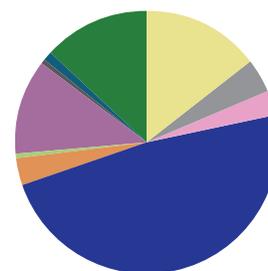

attempt to profit from extreme market volatility.

*Credit ratings listed are subject to change. Credit quality ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest). “NR” is used to classify securities for which a rating is not available. The Adviser receives credit quality ratings on underlying securities of the portfolio from the three major ratings agencies - Moody's Investors Service (Moody's), Fitch Ratings (Fitch), and Standard & Poor's (S&P). When calculating the credit quality breakdown, the Adviser utilizes Moody's and if Moody's is not available the manager selects the lower rating of S&P and Fitch. ¹All government bonds are rated AAA. ²All agency Mortgage Backed Securities (MBS) are rated A. **Credit Ratings:** AAA and AA: High credit-quality investment grade A and BBB: Medium credit-quality investment grade BB, B, CCC, CC, C: Low credit-quality (non-investment grade), or “junk bonds” Not Rated: Bonds currently not rated ³The Global Industry Classification Standard (GICS), a collaboration between Standard & Poor's and Morgan Stanley Capital International, is a system of classification that identifies a company according to its business activity. ⁴The Other Industry Group data is not categorized within the GICS classification system.

The Driehaus Select Credit Fund (the “Fund”), in addition to investing in unrated and investment grade bonds, may also invest in junk bonds, which involve greater credit risk, including the risk of default. The prices of high yield bonds are more sensitive to changing economic conditions and can fall dramatically in response to negative news about the issuer or its industry, or the economy in general. The use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the underlying assets. Derivatives can be highly volatile, illiquid and difficult to value, and there is a risk that changes in the value of a derivative held by the Fund will not correlate with the Fund's other investments. Further, the Fund may invest in derivatives for speculative purposes. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and potential losses may be substantial. The Fund may make short sales. Short sales expose the Fund to the risk of loss. It is anticipated that the Fund will experience high rates of portfolio turnover, which may result in payment by the Fund of above-average transaction costs. This is a nondiversified fund; compared to other funds, the Fund may invest a greater percentage of assets in a particular issuer or a small number of issuers. As a consequence, the Fund may be subject to greater risks and larger losses than diversified funds. No investment strategy, including an absolute return strategy, can ensure a profit or protect against loss. Additionally, investing in an absolute return strategy may lead to underperforming results during an upward moving market. When interest rates increase, bond prices decrease and bond funds become more volatile.

Please consider the investment objectives, risks, fees and expenses of the Fund carefully prior to investing.
